## **DETAILED ACTION**

### ***Introduction***

1. This Office action is in response to claims filed 9/15/03. This application is a continuation of 09/912,461-priority date of 7/26/01, now US Patent 6,751,584. Claims 1-20 are pending and have been examined. The IDS filed 9/15/03 has been considered.

### ***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. More specifically, the claim 1, 2 and 13 simply recite a mathematical algorithm (manipulation of data, vectors and the clustering of tokens), which neither results in a physical transformation, or a practical application which produces a useful, tangible, and concrete result.

### ***Double Patenting***

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting

rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-11 and 22-29 of U.S. Patent No. 6,751,584. Although the conflicting claims are not identical, they are not patentably distinct from each other because every limitation of the current application is found within claims 1-11 and 22-29, although, for example, claim 1 of US 6,751,584, contains a slightly differently worded preamble, and contains a file, wherein claim 1 of the present invention does not contain the file language and is broader, however, one ordinarily skilled in the art, would find it obvious to remove a limitation, which does not render an application patentably distinct.

6. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6, 10, 12, 14, 16-19, 21 of U.S. Patent No. 6,317,707. Although the conflicting claims are not identical, they are not patentably distinct from each other because every limitation of the current application is found within claims 1-11 and 22-29, although, for example, claim 1 of US 6,317,707, wherein the clusters of non-context tokens that form a grammatical model, of the above patent, is interpreted to encompass a lexical correlation among the non-context tokens.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kempe (US 6,816,830) teaches identifying context tokens, determining a frequency count, generating a frequency vector based on an ambiguity class.
